

RockRidge Abrasives

Sanding Disc Information Guide

RockRidge® offers paper-backed and synthetic film-backed sanding discs for use on random orbital or dual-action sanders. Both the paper and film discs are available in 5-inch or 6-inch discs, with either PSA or hook-and-loop options.

Applications for sanding discs include:

- Light Stock Removal
- Surface Preparation (prior to paint and powder coating)
- Blending for Consistent Finish
- Decorative Finishes
- Fine Finishing on Sealers or Topcoats

Paper-Backed Discs - 514

Paper Disc Benefits:

- Sturdy D-Weight, tear-resistant paper backing for light stock removal and surface preparation in 40-120 grits.
- Flexible, tear-resistant, C-Weight latex backing for finishing and blending in 150-800 grits.
- Open Aluminum Oxide coat with a stearate to prevent loading while in use.

Hook-and-Loop Discs

Grit	5-inch	6-inch	Box Quantity	Boxes Per Case

Film-Backed Discs

Film Disc Benefits:

- High tear-resistant, synthetic film backing.
- Can be used for wet sanding applications.
- Provides a uniform, consistent finish
- White-Fused Aluminum Oxide grain with a grit range from 80 to 3,000.
- Open-coat with stearate to prevent loading during use.

Film-Backed Discs - 747

RockRidge® Sanding Discs are made with quality aluminum oxide grains. Aluminum oxide is a versatile grain. It has the cutting ability for stock removal or blending on lower grit sizes. Finer grits deliver a softer scratch pattern that is often desired for finishing and polishing processes.

Aluminum oxide can be used on both ferrous and non-ferrous metals, woods, composite materials, plastics, fiberglass, gel coat, and other surfaces.
